

Key Vocabulary	
asexual reproduction	One parent is needed to create an offspring, which is an exact copy of the parent.
fertilise	The action of fusing the male and female sex cells in order to develop an egg.
gestation	The length of a pregnancy.
life cycle	The journey of changes that take place throughout the life of a living thing including birth, growing up and reproduction .
metamorphosis	An abrupt and obvious change in the structure of an animal's body and their behaviour.
pollination	The transfer of pollen to a stigma to allow fertilisation .
reproduction	The process of new living things being made.
sexual reproduction	Two parents are needed to make offspring which are similar but not identical to either parent.

Key Learning:

1. Flowering plants reproduce when the pollen from one flower fertilises the ovules of another flower and a fruit containing seeds is produced.
2. Some plants reproduce asexually by growing bulbs, tubers and runners
3. Some animals grow their offspring internally and we say they are pregnant. Other animals lay eggs and the offspring develop inside the egg.
4. Different animals (mammals, fish, birds, reptiles, amphibians, insects) go through different stages in their lifecycles from birth to death.
5. Malaika Vaz is a National Geographic explorer
